

# MULTIPEXALFA

sistema multistrato universale

La trasformazione del Polietilene mediante il processo di reticolazione con il metodo a silani (PE-Xb) assicura una lunga durata nel tempo in quanto incrementa la resistenza chimica, meccanica e le prestazioni ad alta temperatura. Le molecole di PE, tramite la reticolazione al 60-70%, subiscono una modificazione strutturale che trasforma il materiale da termoplastico a termoindurente, pur mantenendo la flessibilità tipica dei materiali termoplastici. La sigla Xb identifica il processo di reticolazione con il metodo a silani. MULTIPEXALFA è un tubo multistrato costituito da 3 strati uniti tramite un collante; lo strato intermedio è costituito da una lamina in alluminio (saldato "testa a testa" durante l'estrusione) che lo rende totalmente impermeabile all'ossigeno, conferendo maggiore resistenza a pressione, depressione e schiacciamento pur mantenendo il tubo estremamente duttile; le proprietà organolettiche dei fluidi convogliati rimangono inalterate.

The transformation of Polyethylene through the cross-linking (PE-Xb) assures a long service life since it increases the chemical/mechanical resistance and the performances at high temperature. The cross-linking process at 60-70% causes a structural modification of the PE molecules transforming the thermoplastic material into thermosetting, nevertheless maintaining the flexibility typical of thermoplastic materials. Xb initials identifies the cross-linking process through the silane method.

MULTIPEXALFA is a multilayer pipe made of 3 layers joint through an adhesive; the intermediary layer is constituted by an aluminium foil (butt-weld during the extrusion) that makes the pipe totally oxygenproof, also conferring higher resistance to pressure, under-pressure and crushing although maintaining its ductility; the organoleptic properties of the fluids conveyed remain unchanged.

**PEXALFA**

**Tubi in PE reticolato**  
**crosslinked PE pipes**

I tubi PEXALFA sono prodotti utilizzando il polietilene reticolabile con il metodo a silani. Hanno eccellenti proprietà chimico-fisiche e meccaniche, in particolare:

- sono molto leggeri e flessibili (il peso specifico del PEX è di 0,95 g/cm - acciaio 7,85 e rame 8,9);
- hanno un'elevata resistenza chimica ed elettrochimica;
- Possono essere utilizzati in un range di temperature molto ampio: da -100 a +110 °C;
- L'alto coefficiente di isolamento acustico attenua notevolmente il fastidioso rumore derivante dallo scorrimento dell'acqua.
- Grazie ad una rugosità superficiale estremamente ridotta è possibile ottenere elevate portate con basse perdite di carico.
- Sono idonei al trasporto di acqua potabile come certificato da numerosi istituti: DVGW, KIWA, CSTB, AENOR, NSF, IIF, SVGW, DEVGW, BBA.....

PEXALFA pipes are manufactured using silane cross-linkable polyethylene. They show excellent physical-chemical and mechanical properties:

- very light and flexible (PEX specific weight is 0,95g/cm);
- they show a high chemical and electrochemical resistance
- they can be used at different temperatures: from 100° up to +110° C;
- they have a high soundproofing coefficient reducing the noise level due to the water flow;
- thanks to their extremely reduced surface roughness, it is possible to obtain a high flow rate with very low head losses;
- they are suitable to the conveyance of drinking water as certified by different institutes: DVGW, KIWA, CSTB, AENOR, NSF, IIF, SVGW, DEVGW, BBA...
